> **What the evidence says:** Vaccine myocarditis is a recognized, rare side effect, mostly in young males and usually mild. Emergency-authorized vaccines shipped with a placeholder insert page; full information was in FDA's published fact sheets. COVID-19 risk to children is low, but not zero.

Moon has no finding of misconduct. Washington closed its review in Jan 2024 after her licence lapsed; her Florida licence is clear. These are her public statements, with links to the originals. Several hosts are advocacy outlets.
